

Press Release

Anodyne Health Releases Version 5.0 of Anodyne Analytics™

Atlanta, GA. – August 21, 2009 – Anodyne Health, a leading provider of revenue cycle management solutions for the healthcare industry, is pleased to announce that version 5.0 of Anodyne Analytics™, the company's industry-leading Business Intelligence software for healthcare business professionals, has achieved General Availability status. All current registered users will automatically download the new version the next time they launch the Anodyne Analytics client application.

This new version of Anodyne Analytics introduces a number of new views, additional metrics, greater Excel export integration, and dozens of functional enhancements, many of which were requested by Anodyne's clients. Most notably, Anodyne Analytics 5.0 marks the debut of Anodyne's new Location Intelligence feature. Anodyne's Location Intelligence creates sophisticated, interactive maps of revenue-cycle data, giving Anodyne's users a powerful tool for visualizing and understanding trends and patterns in every aspect of their business. For example, a user might ask for a "heat map" showing the distribution and density of all patients, by ZIP code or county, who visited a particular facility and had a specific combination of diagnosis and procedure codes. Within seconds, the Anodyne Analytics software will process this request and return a color-coded map displaying the requested information, which the user can scroll and zoom in real time, and which can even be exported and shared with others.

"Anodyne Analytics Version 5.0 is the most comprehensive and far-reaching upgrade that Anodyne has ever delivered to its users since the very first release of the product in 2004," said Michael Funk, CEO of Anodyne Health. "This release truly demonstrates the value of Anodyne's Software-as-a-Service business model. We have added new metrics, new Excel export capabilities, new views, and an entirely new class of map-based data visualization, all at no additional cost to our clients."

Anodyne's ad-hoc analytics solution allows business users to interact directly with their data, through a "self-service" model, minimizing the need for support from IT personnel or analysts. With extremely fast response-times, business professionals are able to access desired information within seconds. Organizations that utilize Anodyne Analytics are able to more quickly identify revenue-cycle opportunities, drive increased revenue, and exert greater control over their financial performance.

About Anodyne Health

Anodyne Health (www.anodynehealth.com) is a leading provider of Business Intelligence (BI) solutions for healthcare provider organizations. The company's unique, easy-to-use, web-based BI software, which includes both an ad-hoc analytics and a dashboard application, revolutionizes access to revenue cycle information that was once thought difficult, or even impossible, to obtain. Anodyne's end-to-end solutions are delivered through a low-risk, Software-as-a-Service business model, where the data extraction, hosting, training, support, security, and disaster recovery are all managed by Anodyne.
