South Denver Anesthesiologists Implements Anodyne Analytics™

Atlanta, GA. – April 29, 2009 – Anodyne Health, a leading provider of revenue cycle management solutions for the healthcare industry, announced today that its business intelligence (BI) solutions were implemented at South Denver Anesthesiologists (SDA), a physician owned, professional corporation located in Englewood, CO. SDA was looking for a solution that would enable them to access accurate revenue cycle data in a timely manner.

Since 1970, SDA has been providing anesthesia services to the south metro Denver area. SDA, which is currently composed of 75 physicians, has formed several subspecialty teams in order to provide better care for the communities which they serve.

Michael Battock, Chief Financial Officer of South Denver Anesthesiologists said, "With our previous reporting methods, there was a concern about the lack of consistency and accuracy of the data we were getting. We were also unable to get to the data we needed within a timely manner. With Anodyne's solutions we will be able to get to information quickly and easily, and can be reassured that there aren't any errors in the reports we pull."

"Anodyne Analytics™ will allow South Denver Anesthesiologists to obtain quick and accurate information without relying on technical resources to do the data extractions," stated Michael Funk, CEO of Anodyne Health. "As a result of implementing our BI solutions, SDA will significantly compress their analytical cycle while putting powerful analysis tools in the hands of their management team."

About Anodyne Health

Anodyne Health (www.anodynehealth.com) delivers revenue cycle solutions to healthcare provider organizations including physician billing, medical coding, and business intelligence software. The company's billing solution helps practices collect more revenue, minimize compliance risk, and gain a deeper understanding into the business side of their practice. Anodyne's unique, easy-to-use, web-based business intelligence software revolutionizes access to revenue cycle information that was once thought difficult, or even impossible, to obtain.
